

Ceaseless Flow

Water Beads Preparation Guide

1. Add ~1 teaspoon of dry water beads to a separate clean bowl. Cover them with 1 inch of fresh clean water.

2. Let them soak for ~6 hours. The water beads will absorb water and grow larger.

3. Pour the wet water beads to the lamp bowl. Add more water to the bowl.

4. To create the best shadow pattern, leave only 1 loose layer of water beads so they move around when the bowl moves, and keep the water level at half of the water bead height.

Notes: Refer to the Bill of Materials for bowl and water beads specification.
